Stachybotrys chartarum phenol oxidising enzyme

Phenol oxidising enzyme; detergent; bleaching;

Stachybotrys

```
The present sequence is that of the Stachybotrys chartarum MUCL 38898 C.DNA encoding a phenol oxidising enzyme (see AAY95537). The invention relates to detergent compositions comprising novel phenol oxidising enzymes that are encoded by nuclear acids capable of hybridising to the S. Chartarum phenol oxidising enzyme gene (see AAA50018), provided the enzymes are capable of modifying the colour associated with dyes or coloured compounds, and are produced from a bacterium, yeast or fungus (see AAY95538-40). The phenol oxidising enzymes can be used for pulp and paper bleaching, for bleaching the colour of stains on fabric and for anti-dye transfer in detergent and textile applications. They may also be capable of modifying the colour in the absence or presence of an enhancer. Expression vectors and host cells comprising a nucleic acid encoding a phenol oxidising enzyme, methods for producing the phenol oxidising enzyme, and methods for constructing expression hosts are provided.
                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        д
                                                                                              This cDNA encodes Stachybotrys chartarum phenol oxidizing enzyme. Phenol oxidizing enzymes encoded by nucleic acid sequences which hybridize to this DNA are claimed, as long as the enzyme is capable of modifying the colour associated with dyes or coloured compounds. The enzymes are useful in detergent compositions and for modifying colors associated with dyes or colored compounds which occur in stains in a associated with dyes or colored compounds which occur in stains in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1701

Sequence
                                               sample. The enzymes are also useful for pulp and paper bleaching,
anti-dye transfer in detergent and other textile applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Wang

The present invention describes a detergent composition containing a purified phenol oxidising enzyme derived from Stachybotrys. The present sequence encodes Stachybotrys chartarum phenol oxidising enzyme. The enzyme can be used to modify the colour of dyes and other coloured compounds (e.g. for use in pulp and paper bleaching also for removing stains, e.g. food, tea, blood etc., from fabrics) and for preventing dye

The present sequence represents a PCR fragment of Stachybotrys chartarum phenol oxidising enzyme. The enzyme can be used to modify the colour of dyes and other coloured compounds (e.g. for use in pulp and paper bleaching also for removing stains, e.g. food, tea, blood etc., from fabrics) and for preventing dye transfer during fabric washing.

                                                                                                                                                                                                                                                                                                                                                               This sequence encodes the Stachybotrys chartarum phenol oxidase enzyme of the invention. The invention is used to modify a coloured compound a prevent dye transfer during fabric washing, or for stain bleaching or anti-dye transfer. It is useful in the detergent, paper and pulp, text and food industries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Phenol |

The presence encodes Stachybotrys chartarum phenol oxidising enzyme. The enzyme can be used to modify the colour of dyes and other coloured compounds (e.g. for use in pulp and paper bleaching also for removing stains, e.g. food, tea, blood etc., from fabrics) and for preventing of the pulp and paper bleaching also for preventing of the pulp and paper bleaching also for preventing of the pulp and paper bleaching and for preventing of the pulp and paper bleaching and for preventing of the pulp and paper bleaching also for preventing of the pulp and paper bleaching and for preventing of the pulp and paper bleaching and for preventing of the pulp and paper bleaching and for preventing of the pulp and paper bleaching are pulp and paper bleaching and for preventing of the pulp and paper bleaching are pulp are pulp and paper bleaching are pulp are pulp and paper bleaching are pulp and paper bleaching are pulp are pulp are pulp and paper bleaching are pulp are pulp are pulp are pulp are pulp a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence encodes the Stachybotrys chartarum phenol oxidase enzyme of the invention. The invention is used to modify a coloured compound and prevent dye transfer during fabric washing, or for stain bleaching or anti-dye transfer. It is useful in the detergent, paper and pulp, textile
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 21; Fig 6; 64pp; English.

                                                                                                                                                                                                                                                                                                                                                                                CDS
The present sequence is that of the Stachybotrys chartarum MUCL 38898 phenol oxidising enzyme gene, including promoter and terminator
                                   Detergent composition comprising novel phenol oxidising enzyme obtained from fungus or bacteria, useful for pulp and paper bleaching, bleaching color of stains on fabric and for anti-dye redeposition -

sequences. The gene was isolated from genomic DNA using primers (see AAA50023-24) based on isolated peptides of the enzyme. The gene codes for a 594-amino acid protein (see AAY95537). The invention relates to detergent compositions comprising novel phenol oxidising enzymes that are encoded by nucleic acids capable of hybridising to the present DNA sequence, provided the enzymes are capable of modifying the colour associated with dyes or coloured compounds, and are produced from a bacterium, yeast or fungus (see AAY95538-40). The phenol oxidising enzymes can be used for pulp and paper bleaching, for bleaching the colour of stains on fabric and for anti-dye transfer in detergent and textile applications. They may also be capable of modifying the colour in the absence or presence of an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            uninoculated leaves were harvested 20 hr post-inoculation (Wei, Wise). In the TJ Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one cDNA library was made, and I million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Choi, Close). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or

A backbone of the vector is basically from pBluescript(KS), that.
was in vivo excised from a modified IPs phage vector (Mo bi Tec, and the part of the cDNA that was digested with Xhol was ligated to SalI site of the vector and the 3' end including polya.

tail was ligated to BamHI site of the vector. cDNA instert could be amplified with conventional T7 and T3 primers. This full-length cDNA library was generated basically according to the method described in The Plant J 15, 707-720 (1998) Seki M. et al.

Protonemata were blended by the POLYTRON, and then cultivated on the BCDATG medium for 13-14 days under the continuous light.

Cultivar PI 567374 is partially resistant to the disease SDS. Plant tissue (expanded leaves, folded leaves, and new shoots) were collected at 1, 6, 24, and 48 hrs. after inoculation and their mRNA pooled equally for cDNA construction. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                vector. The ligated cDNA fragments were transformed into E.coli ElectroMax DH10B host cells. Plants were inoculated by Shuxian Li (Glen Hartman lab, University of Illinois). Library was constructed by Steve Clough (Lila Vodkin lab, University of Illinois)."

Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with an XhoI restriction site. EcoRI adaptors were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA insert is protected from XhoI digestion via methylation during first strand synthesis. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBlueScript than the content of the cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBlueScript than the content of the conten
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2: XhoI; The cDNA library wms constructed from mRNA isolated from 2-3 week old seedlings that were induced for symptoms

/note="Vector: pBK-CMV; Site_1: ECORI; Site_2: XhoI; This
cDNA library was constructed from polyA+ enriched mRNA
from field grown leaves. Mid-size actively growing leaves
were collected and pooled from several plants and frozen
immediately after harvesting in liquid nitrogen. The cDNA
was prepared using an XhoI-poly(dT) linker-primer. An
ECORI adapter was ligated to the blunt end cDNA and the
products were digested with ECORI and XhoI enabling
products were digested with ECORI and XhoI enabling
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          directional cloning into the lambda ZAP Express vector. The library was amplified using the host strain XLI-Blue MRF'. Mass excision of the library was performed to obtain pBK-CMV phagemid clones in the host strain XLOLR. Single pass DNA sequencing was performed using the T3 promoter primer: 5'. ATTAACCCTAAAGGGA 3'. This library was constructed by Alex Richman."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              //note="Wector: lambdaZAP; Site_1: EcoR1; Site_2: Xho1; Seeds were surface sterilized then germinated under axenic conditions in the dark at room temperature on filter paper with water, nystatin and cefotaxime in covered crystallization dishes. Five-day old seedling roots were then harvested, total RNA was prepared, poly(A) RNA was purified, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids. These steps were performed in the TJ Close laboratory at the University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see http://www.genome.clemson.edu/projects/barley. To order this clone see http://www.genome.clemson.edu/projects/barley.
